ESPRESSO / WARM WHITE / GREEN

Intelligence, with a *proof.*

A complete visual redesign of the landing page, account experience, and multi-page evidence workspace. Cinematic motion, consistent controls, and verified product workflows.

30/30
BROWSER SCENARIOS

20 + 7
UNIT / REGRESSION TESTS

5:26
SILENT · 1080P · 30 FPS

Production build, TypeScript, ESLint, and whitespace checks passed. Latest applicable scenario results; detailed execution history follows.

01 / THE PRODUCT STILL WORKS

Real workflows. Recorded evidence.

Chromium against the production frontend, real FastAPI, PostgreSQL, Redis, model/search providers, both MCP servers, and Anvil chain 31337 with the evidence workers and watchdog.

Landing & responsive UI	Pipeline interactions, live SHA-256 demo, keyboard tabs, CTAs, public routes, mobile menu, motion controls, and layouts from 320 to 1600 pixels.
Accounts & sessions	Signup, login/logout, email verification, password recovery, single-use tokens, invalid tokens, protected routes, HttpOnly cookies, and automatic session refresh.
Projects & preferences	Organization/project creation and rename, environment selection, switching, account appearance, and persistent notification preferences.
Runs & evidence	Real model/search workflow, report and source links, score, saved run, confirmed steps, run integrity, Merkle proofs, content match/mismatch, filters, pagination, clipboard, and JSON downloads.
Agents & integrations	UI identity registration, TypeScript and Python SDK logging, fingerprint match/mismatch, concurrent registrations, scoped key creation, and revocation with HTTP 401 rejection.
Alerts & team access	Identity drift, evidence inspection, acknowledge/resolve/reopen, investigation notes, invitations and acceptance, roles, viewer restrictions, member removal, search, and invitation resend/revoke.

> **Execution history:** the consolidated production run passed 28/29. A source-link omission was corrected, and the affected complete pipeline passed its focused rerun. One supplemental controls scenario passed. The latest result is 30 unique passing scenarios, with no skipped scenarios counted as passes.

A confirmed research run

Run **run_20261114_120724_cc77ccd2** completed with a 2,128-character cited report and a score of 85/100. All 10 steps were confirmed. Run integrity, proof retrieval, and reopening the saved report passed.

```

02 / WHAT WAS ACTUALLY TESTED

30 scenarios.
Latest results: passed.

PASS	verification email opens a working verification page
PASS	password reset email opens a working reset form
PASS	implemented verification and reset forms enforce token use and allow new-password login
PASS	organization and project create, rename, switch, and persistence
PASS	UI-created API key drives SDK logging, chain proof, browser evidence, export, and revocation
PASS	agent UI registration and real on-chain fingerprint match and mismatch
PASS	SDK identity drift reaches the alert inbox and supports acknowledge, resolve, and reopen
PASS	invite acceptance, role changes, viewer restrictions, and member removal
PASS	invalid tokens, unknown run, and automatic access-cookie refresh
PASS	run and audit filtering, pagination, and real JSON downloads
PASS	all notification preferences persist, and invitations resend and revoke
PASS	concurrent SDK registrations return a receipt for each independent agent
PASS	completed pipeline workspace pages work on mobile and show the active evidence chain
PASS	a dashboard-launched pipeline completes with a report and confirmed evidence
PASS	landing actions, protected session, and failed recovery are honest
PASS	all workspace pages, theme, search, and mobile navigation
PASS	key creation, proof inspection, content verification, agents, and run launch
PASS	authentication layout is responsive
PASS	every workspace page fits a phone viewport
PASS	persisted failed runs stay failed and show the backend reason
PASS	landing pipeline, hash demonstration, links, and motion persistence
PASS	public pages fit phones and tablets with working mobile menus and return links
PASS	every workspace route fits 320, 768, and 1600 pixels without runtime errors
PASS	keyboard search, dialog escape, and reduced motion remain usable
PASS	signup validation, password visibility, and legacy route redirects
PASS	real signup, session cookies, workspace pages, settings, logout, and login
PASS	real protected route and stale display cache cannot authenticate
PASS	real pipeline launch returns a signed stream and rejects an unsigned stream
PASS	browser preflights allow workspace mutation methods
PASS	secondary controls: account appearance, scoped keys, searches, refreshes, and score export

03 / THE FINISHED EXPERIENCE

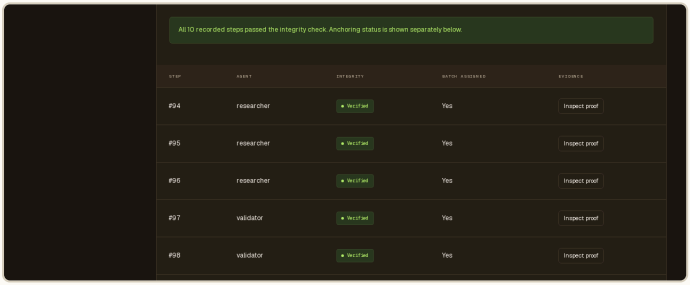

One coherent system.
From first visit to final proof.

The design spans the landing page, authentication and recovery, invitation acceptance, all 12 workspace areas and run details, pricing, coming-soon, and error screens. Dark mode is the default; the warm light theme remains available.

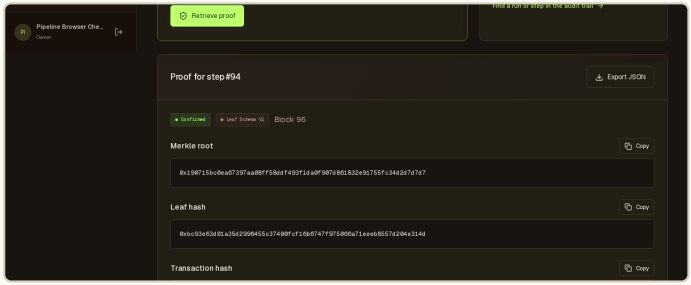

Motion includes the dimensional evidence object, orbital paths, scroll reveals, page entrances, charts, dialogs, and hover states. Persistent motion controls and system reduced-motion preferences keep the experience adaptable.

A report defect corrected during verification

Original search URLs now travel separately through the pipeline state, so model summaries cannot silently drop them from the final sources. The report distinguishes durable recording from confirmed on-chain anchoring, and no longer hardcodes an incorrect network claim. Seven regressions verify the source/report behavior.

LIVE / RUN INTEGRITY

LIVE / CONFIRMED STEP PROOF

The silent cinematic film

5:26 · 1920×1080 · H.264 · 30 fps · zero audio tracks. Real application actions with animated chapter labels, cursor, click ripples, field-note cards, and reading/progress indicators. The disposable key is masked and revoked. The supplied reference is preserved.

Limits of this result

- Chromium only; Firefox and WebKit were not exercised.
- Local integration, not a production deployment certification.
- Console email tokens were followed; external email delivery was not tested.
- Local Anvil receipts were verified; public-network reliability was not tested.
- Optional external evidence publishing was disabled.
- Model output correctness is not guaranteed by a cryptographic proof.

The complete written report, structured test summary, screenshots, chapter timings, video metadata, and reproduction instructions are included beside this document. The test chain bootstrap addresses were refreshed from the actual local deployment receipt; production infrastructure was not modified.
